- ✓ Ενσωματωμένο Bluetooth 4.0 + EDR
για σύνδεση με ακουστικά Bluetooth
και κινητά τηλέφωνα

VP-T49G

- ✓ Ενσωματωμένο WiFi
- ✓ 2 θύρες Gigabit
- ✓ Εύκολη εγκατάσταση Plug & Play
- ✓ Έξοδο Standard HDMI για σύνδεση με TV monitor
- ✓ Θύρα USB 2.0 για καταγραφή κλήσεων, screenshots και άλλων εφαρμογών
- ✓ Κατάλογος έως και 1000 εγγραφών

Yealink Video Conference System

- ✓ 4-site 1080P full-HD multipoint control unit (MCU)
- ✓ 18x optical zoom PTZ camera
- ✓ Microphone arrays with 360 degree voice pickup
- ✓ H.264 high profile, saving 50% bandwidth
- ✓ Yealink intelligent firewall transversal
- ✓ Video recording and playback
- ✓ Dual displays and ‘focus’ feature
- ✓ High compatibility and interoperability

Product portfolio

VC400 for head office

- MCU and Endpoint All-in-one
- 4-site 1080P video conferencing
- 8-site 720P upgraded by license

VC120 for branch office

- VC Endpoints only
- 1 video call + 1 audio call

VC110 Endpoint

- VC Endpoints only
- 1 video call + 1 audio call

Remarkable quality at industry's Top-level

Support for four-sited 1080p video means that users can now enjoy a full-HD, multi-sited video conference, plus 1080P contents sharing.

Included is an 18x optical zoom HD camera that produces images which guarantee an immersive and realistic conferencing experience.

There is also a 360-degree omnidirectional pickup microphone array and support for HD level which produce CD-level sound quality.

No additional dedicated network is now needed

Other vendors under 8% packet loss

Yealink VCS under 8% packet loss

H.264

High Profile

Save 50%

bandwidth

1080P / 720P

1Mb / 512Kb

Anti 8%

packet loss

Support for the most advanced algorithms – H.264 High Profile – means saving 50% bandwidth for the same high-quality video.

Support for adaptive bandwidth and dynamic bandwidth adjustment, and an 8% resistance packet loss, means that video conferencing still runs smoothly in fluctuant network conditions.

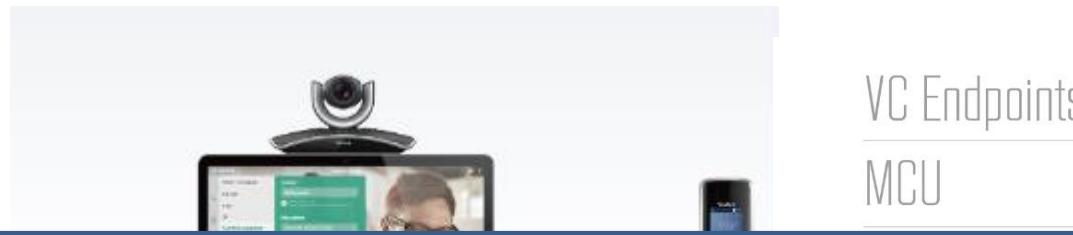

Five-minute from box to work

Support of an intelligent firewall means that plug and play are possible without any further firewall configuration.

The VC series is designed to let you access every function with the ease of a smart phone. As a result, almost all operations can be carried out in just three simple steps.

Flexible interoperability:

Say goodbye to expensive license

The system supports a dual protocol of H.323 and SIP to ensure good compatibility with mainstream video conferencing systems and endpoints.

It is compatible with most IP-PBX that support video.

Interoperability with video phones, tablet PCs and smart phones also means that users have easy access to video conferencing at any time and place.

A minimalist illustration featuring two stylized, symmetrical faces of a person with dark hair and light skin, facing each other in profile. They are wearing white collared shirts. The background is a plain, light gray.

Communication is everywhere
