

BACKBOX

Disaster Recovery for Security and Network Devices - Simplified

BACKBOX

MARKET CHALLENGE

- Complex Networks and Complex Configurations
- Multi-Vendor Environments
- Lack of Unified Management System
- Long Recovery Time

BACKBOX

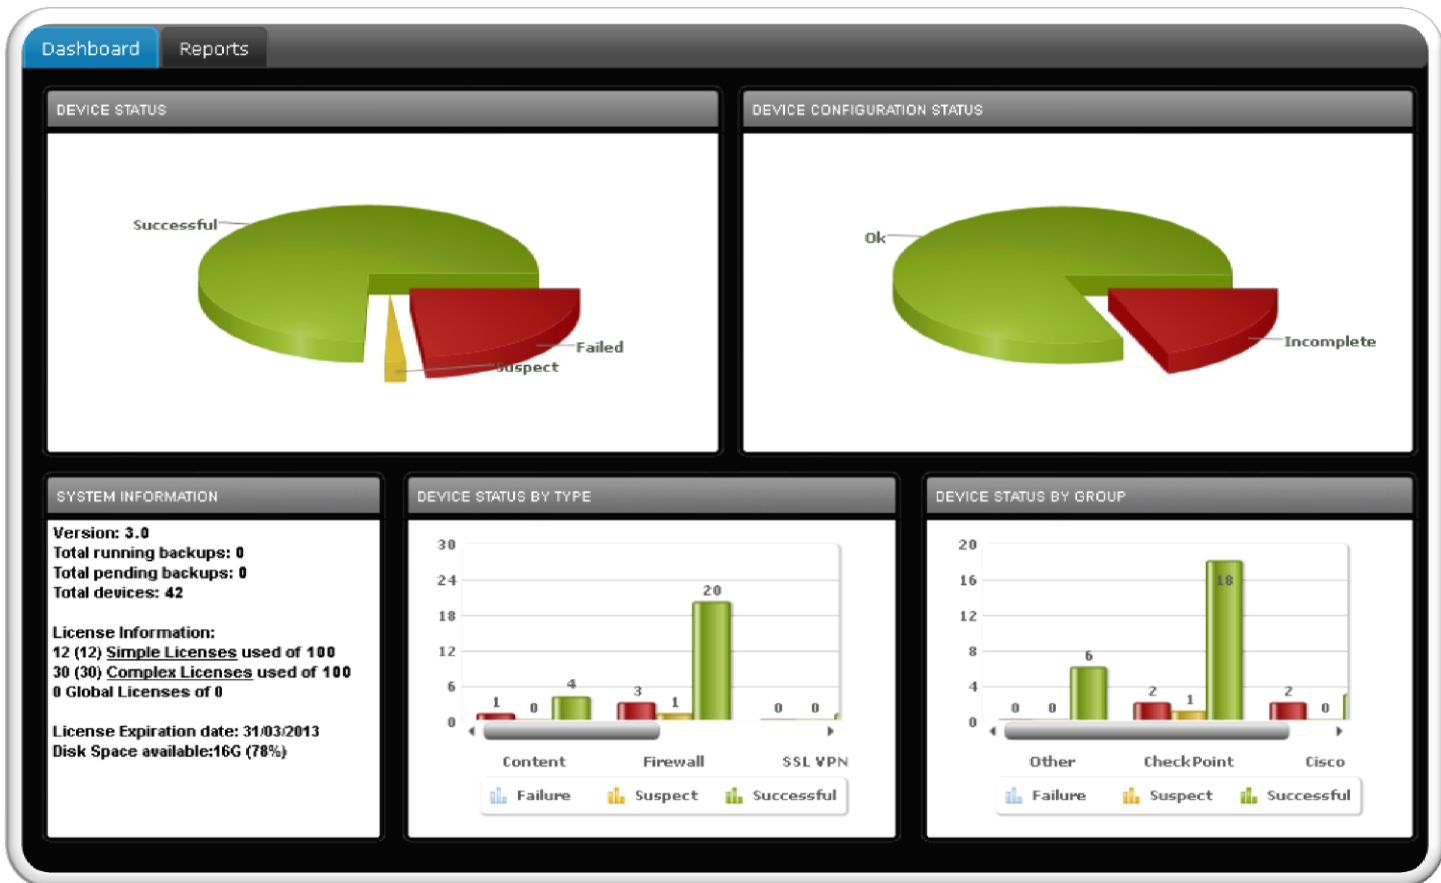

OUR GOAL

- Automation of Configuration Backup
- Disaster Recovery Planning and Execution
- Preemptive Monitoring
- Single Management System
- Minimize Downtime

BACKBOX - FEATURES

UNIFIED WEB CONSOLE

BACKBOX

MULTI-VENDOR SUPPORT

BACKBOX - FEATURES

FULL AUTOMATION

- Non Intrusive
- Agentless
- No Configuration Changes
- No Scripting
- Scheduled Backups
- Single-Click Recovery

BACKBOX - FEATURES

DEVICE MANAGEMENT

- CLI Access to the Device
- HTTP/s Popup based on IP and Port
- Pre-Configured Commands
- Full Audit Log
- Authentication Required
- Fully Customizable

BACKBOX - FEATURES

DYNAMIC INVENTORY

- Refresh data with every backup
- Customizable Fields
- Full infrastructure Report by type of Device

Name	IP	Version	Hardware Model	CPU Type	RAM	Disk %
CheckPoint Management Server	192.168.10.250	R75.40	Smart-1 25	Quad Core 5520	2048MB	/ - 85% /var – 45%
Cisco_3760	172.25.11.26	IOS 12.4	Catalyst 3760		128MB	
DNS Server	172.26.14.12	CentOS 5.4	HP DL380 G6	Dual XEON	4096MB	/ - 67%

BACKBOX - FEATURES

DISASTER RECOVERY PROCEDURES

- Step by Step procedures for Recovery
- Custom Procedures
- Central location for downloading network related information

How to Recover Configuration for Juniper Secure Access/MAG

1. Perform initial configuration according to the vendor documentation.

2. Open an internet browser and login to the address:

<https://<Address>/admin>

3. Supply credentials to login to the management console.

4. From the left pane, click on Maintenance -> Import/Export -> Import/Export configuration.

5. Click on Browse locate the backup configuration file (JuniperConf*).

6. Specify the password for the backup configuration file.

7. Click on "Import Config".

BACKBOX - FEATURES

BACKUP VERIFICATION

➤ MD5 Checksum

➤ File Size

➤ File Content

➤ File Corruption

BACKBOX - FEATURES

AUTOMATING DEVICE TASKS

- Push Configuration to Multiple Devices
- Device Specific Commands
- Customizable for your Environment

BACKBOX - FEATURES

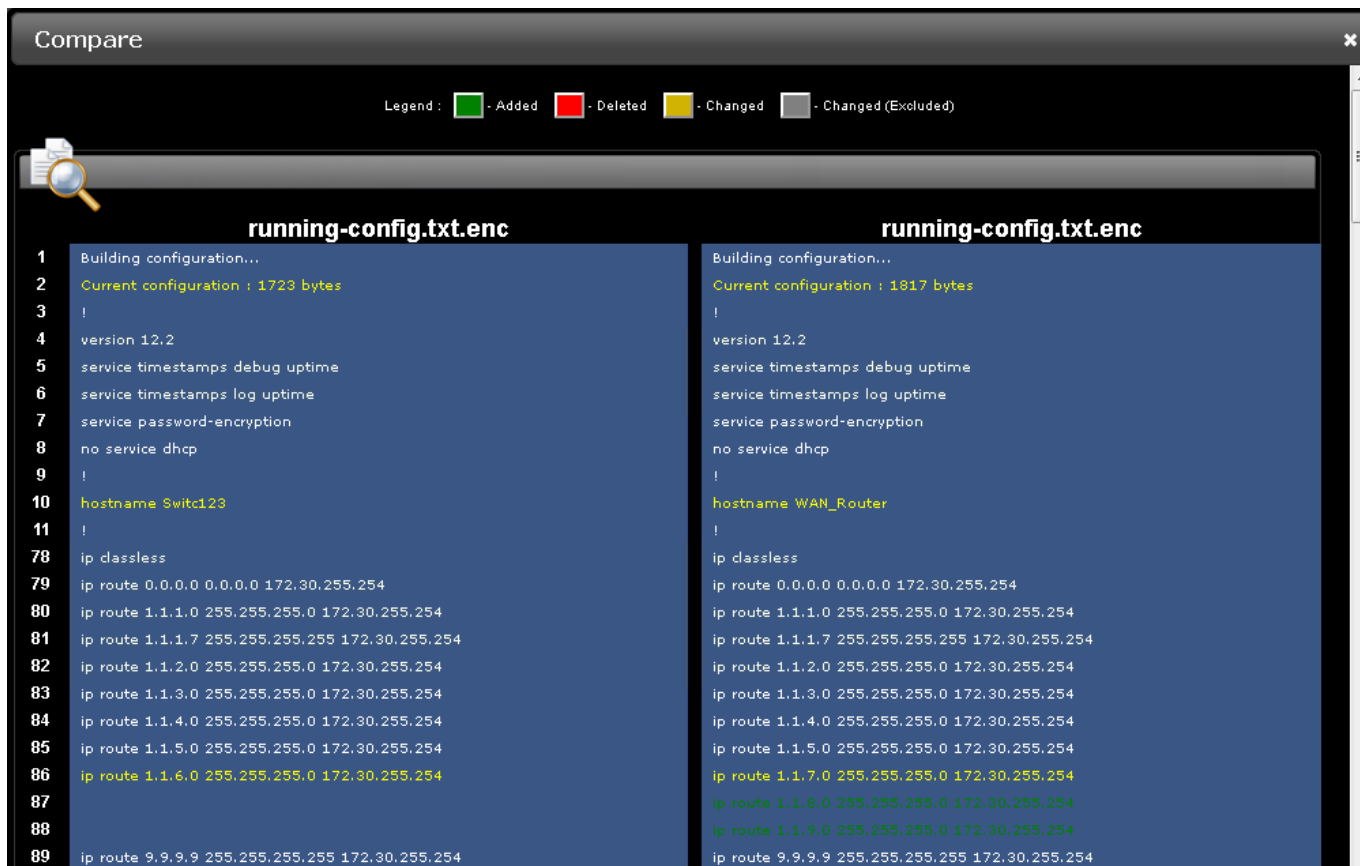

AUTOMATING DEVICE TASKS

- Password Policy
- User Management
- Static Routes
- Access Lists
- Global Parameters (Hostname, NTP Servers, DNS Servers)
- Patch/HotFix Installation

BACKBOX - FEATURES

CONFIGURATION COMPARISON

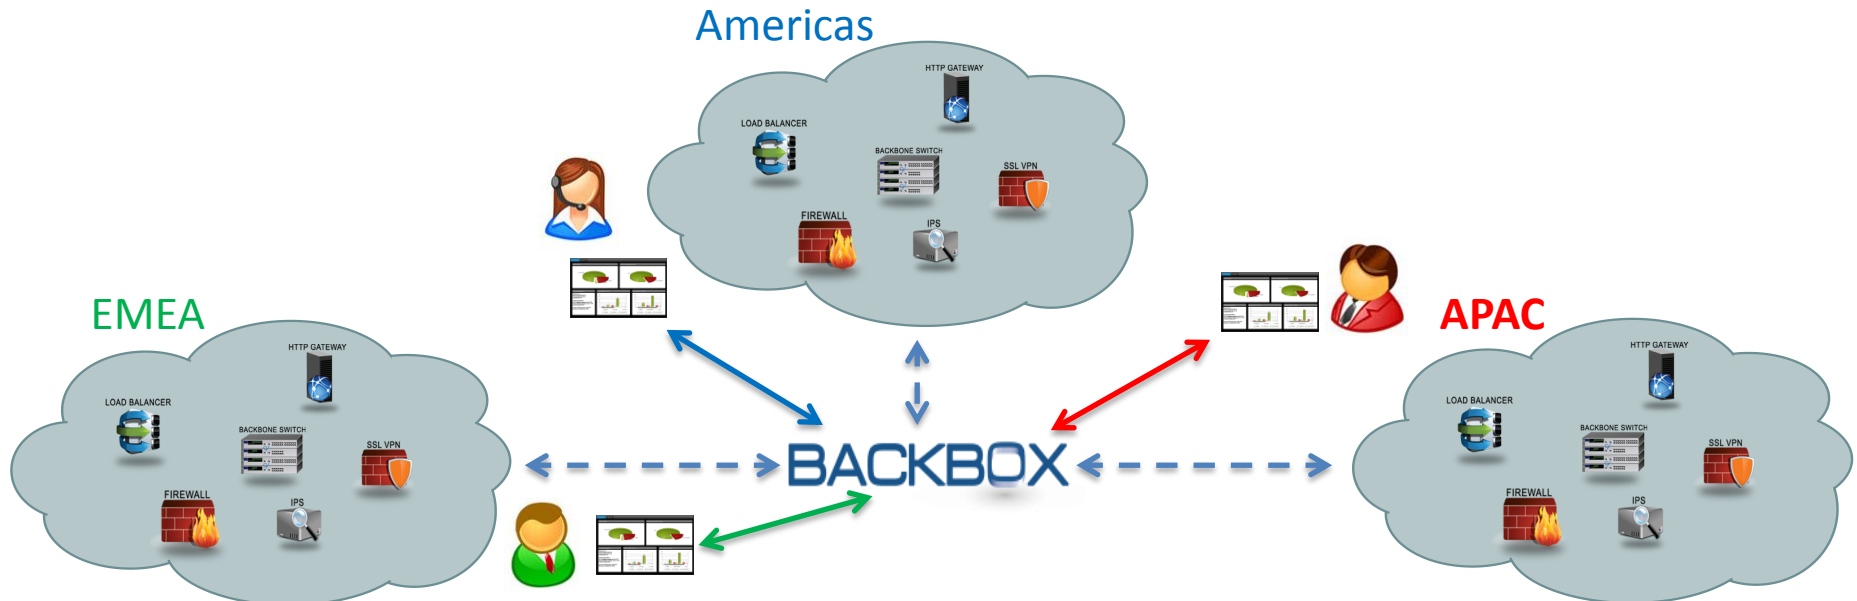

The screenshot displays the 'Compare' window of the BACKBOX tool, which compares two configuration files. The window has a dark theme and a legend at the top indicating changes: green for 'Added', red for 'Deleted', yellow for 'Changed', and grey for 'Changed (Excluded)'. The left pane shows the 'running-config.txt.enc' file with line numbers 1 through 89. The right pane shows the same file with line numbers 1 through 74. The configurations are identical until line 10, where the hostname is 'Switch123' in the left file and 'WAN_Router' in the right file. From line 78 onwards, the right file contains additional IP routes that are not present in the left file, highlighted in green.

Line	Left File (running-config.txt.enc)	Right File (running-config.txt.enc)
1	Building configuration...	Building configuration...
2	Current configuration : 1723 bytes	Current configuration : 1817 bytes
3	!	!
4	version 12.2	version 12.2
5	service timestamps debug uptime	service timestamps debug uptime
6	service timestamps log uptime	service timestamps log uptime
7	service password-encryption	service password-encryption
8	no service dhcp	no service dhcp
9	!	!
10	hostname Switch123	hostname WAN_Router
11	!	!
78	ip classless	ip classless
79	ip route 0.0.0.0 0.0.0.0 172.30.255.254	ip route 0.0.0.0 0.0.0.0 172.30.255.254
80	ip route 1.1.1.0 255.255.255.0 172.30.255.254	ip route 1.1.1.0 255.255.255.0 172.30.255.254

PCI COMPLIANCE

Payment Card Industry (PCI) Card Production Logical Security Requirements, Version 1.0 - May 2013

- Section 5.3.i - *"The vendor must implement network device backups prior to any change and securely store and manage all media".*
- Section 5.4.1.a - *"The vendor must ensure all documents relating to firewall configurations are stored securely".*
- Section 6.3.i - *"The vendor must make a backup of the system being changed before applying any patches".*
- Sections 6.5.1.d - *"The vendor must protect any software backup copies from accidental destruction".*

BACKBOX - FEATURES

ADDITIONAL FEATURES

- Virtual Appliance
- 64bit Linux Based OS
- Distributed Architecture
- Built-in Dynamic Firewall
- Credential and Configuration File Encryption
- Self-Backup and Automatic Remote Storage
- Full Auditing
- IP Based Access Control
- Secure Access to Devices
- NAT Support
- Fully Customizable

BACKBOX

LICENSING

- Perpetual license based on number of devices (additional server instances at no cost)
- 2 Types of licenses
 - Security Devices
 - Networking Devices
- Yearly Maintenance
 - Support
 - Product Upgrades
 - Product/Version Database Updates
- MSSP and SaaS Pricing Available

BACKBOX

SUMMARY

DAY-TO-DAY

- Saves Times
- Automates routine operations
- Insures Configuration Backups
- Simplifies Disaster Recovery Planning

DURING DISASTER

- Minimizes Downtime with Centralized, Verified, Secure One-Click Recovery
